keeping plank canoes (*mon*). Dug-outs are usually left on the beach, care being taken to draw them up above high-water mark.

No special areas are set apart for latrines. People go into the bush, as a rule not very far away, the women keeping to the area behind their own quarters at the back of the line of huts. In the case of a shore village, the men and boys wander along the beach. Some attempt is made—rather spasmodically—to keep the village clean, each woman sweeping the area round her own hut, with a broom made of bundles of the midribs of coco-nut palm leaves, tied at one end, without a handle. One man at Kurtatchi, more inventive than the others, made a rough wooden shovel, with handle all in one piece, with which to remove pigs' dung. Different villages vary very greatly in the extent to which they are swept and cared for, and as dogs and pigs wander round freely, while everybody constantly flings down areca-nut husks, bits of coco-nut, and miscellaneous oddments, even a short period of neglect suffices to give the village a very unkempt appearance.

Huts. At Petats, and a few other villages, under the tuition of the Missions, the natives now build themselves houses raised on piles, with plank walls and high-pitched roofs (see Pl. 3 *b*). But in most places, especially in Bougainville, the native type of hut still predominates, built on the bare earth, thatched with sago-palm leaves in the shape of a broad gothic arch, with the roof almost touching the ground on both sides. They are all exactly alike; their appearance can be seen from the photographs. There are no windows. At each end is a very small opening (a typical one measured 21 × 16 in.), serving as entrance and exit, closed by having planks set across it at night or when the hut is left empty. At the present time a few natives have plank doors swung on hinges and perhaps fastened with a bolt bought at the Chinese stores. The doors are raised about 3 ft. from the ground-level, and in front of each is a sort of shelf of split areca-palm trunks, 2 or 3 ft. in width, which serves as a sitting platform or verandah, as well as an aid to scrambling in and out. The end of the hut, facing the dancing space, with its entrance and verandah, is called *tagoin*, and is reserved for the men, women being allowed to use it only on certain ceremonial occasions. The women's place is at the back, called *babots*, including not only the back 'verandah' but all that portion of ground which adjoins the back of the huts, irregular in its outline because the larger huts project into it farther than the

lime is made from coral; branched coral being preferred.

preparation is the work of the women, and consists of burning the coral with a minimum of slaking. The work is carried on in the recesses of the bush, the place being kept secret and no men permitted to approach it. Large quantities are prepared at a time, at infrequent intervals.

Areca-nut and betel-pepper must be provided in abundance on every ceremonial occasion, and are always given to visitors from other villages to take home with them on their return. Each individual carries his own supply of lime, or begs a dip from his neighbour; it is not provided with the other ingredients. When in his own village the chewer of the betel-mixture will freely fling the skins about on the ground, to be swept up by the women in the course of their cleaning. They are thrown away in any convenient spot, in the case of villages on the cliff top generally over the cliff, or they may be burnt. There does not appear to be any special place for disposing of them, as is described by Ivens (1927, p. 287) for the SE. Solomons. But when on a visit to another village, particularly to one in the mountains, where there is always a feeling that the people are not to be trusted, the skins are carefully put into the little basket which everybody carries, and brought away, lest an enemy should use them for making 'bad medicine'.

Branches of areca-nuts are carried by the messengers sent out by the *tsunaun* to summon people to a ceremony. (Cf. Ivens, 1927, p. 288.)

The natives say that chewing the betel-mixture 'makes them feel strong'. I can testify that when they have plenty to chew they are livelier and more inclined to talk. It is known to them that people who chew too much of it are apt to fall into a slightly dazed and stupid condition, and there are a very few who do not like the effect it has upon them and therefore avoid it. The majority, however, obviously feel lost without it, like an inveterate smoker left without tobacco.

STORIES OF THE ORIGIN OF VARIOUS FOODSTUFFS

Among my collection of stories there is a large number explaining how the people came to be possessed of, or to learn to use, certain of their foodstuffs. Many of these turn on the activities of the famous 'two brothers', and are connected with a widespread series extending over a large part of the Pacific (see references in my paper on Folk-tales, 1932, p. 74). As the stories are in most cases
